

OUR PROJECTS

SECTOR: HOSPITALITY

PRACTICAL HENRY'S

DESCRIPTION:

Callidus Engineering provided design services for the new Practical Henry's Pub & Eatery. The basic renovation was to join two separate existing dining establishments that shared a kitchen into one restaurant with better traffic flow. The renovation also included relocating and reworking an existing servery, introduce an outdoor patio and coordinate unique interior design components.

CONSULTING SERVICES:

Callidus Engineering provided the plumbing and electrical engineering for the project. No changes to the mechanical systems were required. Electrical design included power distribution, lighting and controls, exit and emergency lighting, and communications. Lighting design included accent lighting, general lighting and lighting controls. The plumbing design included small changes to relocate the existing servery.
